Vocabulary Workouts for Academic Word List

Sublist 1

Introduction and Rationale

There is no doubt about the need for teachers to focus explicit vocabulary instruction on general academic words from across academic disciplines, for example, words such as context, method, and indicate. While it is clearly essential to teach vocabulary words embedded in the materials students are reading in class, it can also be helpful to draw upon lists of words that have been shown to be important (Folse, 2004). The words featured in these materials are the 60 most common academic words from across academic disciplines (Coxhead, 2000; 2011).

For many students, especially English language learners (ELLs), learning to use vocabulary includes understanding the sentence structure needed to convey messages. Using sentence frames to teach important vocabulary can support students in not only understanding the meaning of new words, but also in how to use that vocabulary in meaningful exchanges in speaking and writing (Dutro & Kinsella, 2010). The sentence frames in these materials (modeled after Dutro & Kinsella, 2010) provide examples of the language structures needed to communicate effectively and give students practice using the words in relevant and academically appropriate ways.

As recommended by Beck et al. (2002), instruction should involve students in deeply processing words they are likely to encounter most often. Deep processing engages students in critically thinking about the ways words are used in different contexts. It involves encountering words many times and learning to use the words in meaningful sentences in both speaking and writing. The additional questions included with each academic word allow teachers to recycle the new vocabulary in various ways to provide students with more practice using the vocabulary. These questions could also be used for assessment purposes.

Dutro and Kinsella (2010) suggest the following steps for presenting new vocabulary to ELLs.

1. Write the word and pronounce it a few times.
2. Break long words into syllables and tap out syllables, emphasizing the stressed syllable.
3. Lead students in quick pronunciation practice.
4. Explain the word clearly (not exhaustively) using student-friendly language.
5. Provide a visual representation and/or have learners create a picture, if feasible.
6. Give two easy to understand examples.
7. Engage learners in structured oral and written tasks.

Two additional ideas about teaching vocabulary are essential, particularly for ELLs. Research by Lesaux et al. (2010) found that when teachers asked students to restate their understanding of word meanings this led to greater gains, so teachers will likely want to incorporate this step into their teaching, too. In addition, having a translation of the word in the home language has been shown through research to be most effective (Folse, 2004), so teachers would be wise to encourage the use of translation through bilingual dictionaries and by allowing students to support one another in class.

How to Use these Vocabulary Workouts

Of course, teachers should use their judgment in selecting words to teach based on the needs of their students. Some teachers may want to choose one or two academic words from this list to teach each week, others may want to choose five to seven words per week. It’s clear that teaching words within a meaningful context is helpful, so another good option is to identify words from the Academic Word List that appear in texts the students are reading. Teachers may want to use Tom Cobb’s Vocabulary Profiler http://www.lextutor.ca/vp/comp/to quickly identify the academic words in texts they are using. At this site, teachers can copy and paste any text into a textbox and immediately receive an analysis of words, including a list of words from the AWL that appear in the text.

The example below illustrates how the text appears. The blue words are the 1000 most common English words in English from the General Service List. The green words are the second 1000 most common words in English. The red words are off list words, i.e., these words are content specific words, which are also clearly important to teach. The yellow words are from the Academic Word List. So if students were reading this text about Alzheimer’s disease, the teacher would want to determine whether her students understood and could use create, relaxed, and process. If any of these words were unfamiliar to the students, the teacher would be wise to teach the words explicitly.

![Example text with color-coded words]

Teachers can introduce the word by following the steps outlined above by Dutro and Kinsella (2010). The materials here reflect the use of student-friendly language, provide easy to understand examples, and include structured oral and written tasks to provide students with the essential practice they need to understand and effectively use the new academic words they are learning.

Teachers can initially model the oral task by soliciting possible responses from the students to fill in the sentence frame. The teacher may want to engage the students in chorally repeating the oral task. Students can then work in pairs to practice asking and answering the question, completing the frame with their own information. The teacher should emphasize the importance of students’ using the new academic word when posing the question as well as when answering the question. For ELLs, especially at lower levels, the teacher may want to have the students practice the oral task with two or more partners. The teacher can circulate to monitor, assess and provide feedback.

The teacher will also want to model the written task and engage students in suggesting language to fill in the sentence frame. Students will then write their own sentence, possibly for homework, using the new academic vocabulary word. Teachers should collect the students’ work and provide feedback. The quality of the students’ writing will indicate whether additional instruction is needed.

Teachers will want to find many ways to recycle the academic words that are taught. The additional questions included for each academic word can be used for this purpose. Depending on the level of the students, teachers may want to create specific sentence frames to support students in working with the additional questions. As noted, these questions can also be used for assessment purposes.

Creating a word wall is one way to remind teachers and students to pay attention to the words learned. Students can be challenged to be detectives (Beck et al., 2002) and point out examples of the new words they see and hear outside of class. When they come to class, students can talk about where they saw or heard the word. A poster can be created to keep track of how many times students encounter the words outside of class, as well as how often the teacher and students use the words in class.

<tr>
<th>New Word or Phrase</th>
<th>Explanation</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>authority /au-THOR-i-ty/ (noun)</td>
<td>1. The power to give orders or make decisions</td>
<td>To have authority is to have power to make decisions and to tell people what to do. In a school, the principal has authority. In a business, the boss has authority.</td>
</tr>
<tr>
<td></td>
<td>2. Certain people who others recognize because of their special knowledge</td>
<td>Authority can also be plural—more than one person in power, such as an organization. For example, people report a crime to the local authorities, i.e., the police. A scientist is an authority on the subject he or she studies.</td>
</tr>
</tbody>
</table>

### Conversation Practice:

Q: Who usually has authority in a family?

A: __________________________ (noun) usually has (or have) ______________________ in a family.

### Writing Practice:

Police officers have the ____________________________ to __________________________ (verb + object) when they see someone speeding.

### My Sentence:

1. In your experience, do grandparents usually have authority in the family? Why or why not?

2. Does a player have authority during a sporting event? Why or why not?

3. In your opinion, should teachers share authority with students in the classroom? Why or why not?

4. Do you think authorities agree on how much sleep young people need? Why or why not?

5. What subject are you (or would you like to be in the future) an authority on?
